All My Papers and Unisys Deliver Unrivalled Check Image Data Precision for Financial Institutions

Saratoga, CA. – February 21, 2007 – All My Papers, a developer and distributor of software products that address critical interoperability and data integrity issues for check image exchange, announced today that Unisys Corporation (NYSE:UIS) has integrated All My Papers tools into leading Unisys check scanning devices, including the My VisionX and UEC 6000/7000 Series. The processing software available with these check scanners will utilize All My Papers' MICR OCR, MICR VERIFY and IMAGE Repair technologies to accurately extract necessary data at the time of check image capture.

The All My Papers and Unisys solution automatically extracts and reads MICR information from the scanned check image, such as account numbers and bank routing numbers. The information is used to verify the magnetic read and provide unparalleled accuracy as a result.

Stated Larry Krummel, President of All My Papers, "Check image exchange is growing rapidly as financial institutions add remote deposit capture capabilities. As volumes increase to millions of check images captured and processed daily, errors with data extraction can become unmanageable and very costly. If a number or piece of data is misread by the automated processing system and interpreted as something else, the error is not discovered until it ends up in the wrong account or financial institution. The Unisys solution, using our software tools, maintains the data integrity throughout the check image process, ensuring that the appropriate accounts get credited and debited."

"After extensive testing, we determined that All My Papers had fully functioning, proven software tools we could easily integrate with our scanning devices to ensure accurate check MICR data extraction," says Gary Wallen, Vice President and General Manager, Unisys Payments Systems. "With the help of All My Papers, Unisys customers can expect the highest rate of accuracy and fastest return on investment the marketplace has to offer for check image processing."
