All My Papers
Publishes Case Study Of
X9 IMAGE CLEARING Software Solution
For The State of North Carolina Check 21 Processing

Saratoga, CA – February 24, 2009 – All My Papers (AMP), a developer and distributor of software for Image Cash Letters, announced today it has published a case study describing how the North Carolina Department of State Treasurer (NCDST) implemented AMP's X9 IMAGE CLEARING server based software application for its Check 21 Processing.

NCDST was mandated to upgrade their check clearing system to be Check 21 capable by January 2009. If this deadline was not met, the daily processing fees would double. NCDST processes almost 40,000 checks per day with peaks reaching over 200,000 checks in a single day.

NCDST selected All My Papers (AMP) to implement their X9 IMAGE CLEARING software solution that would minimize impact on their existing processes, interface to their legacy payment systems and process the new file formats sent to NCDST by the Federal Reserve Bank (FRB) – all by the required date.

X9 IMAGE CLEARING is a complete solution for interfacing legacy payment systems to Check 21 Image Exchange. The software operates on a Windows Server platform with a SQL database. X9 IMAGE CLEARING enables posting, archiving and returns processing of X9.37 Image Cash Letter (ICL) files. "The X9 IMAGE CLEARING leverages investment in legacy item processing and payment systems, automates return processing and reduces operational costs" said Larry Krummel, President of All My Papers. "NCDST went into live production with Check 21 check clearing processing on schedule in January 2009, avoiding the increased processing fees. They were able to continue to use their legacy core banking system and streamline their internal processes. This was all accomplished within their budget constraints and with minimum impact on their daily operations."
