All My Papers Releases White Paper on Check Image Exchange Interoperability and Data Integrity Issue Resolution

Saratoga, CA – March 27, 2007 – All My Papers (AMP), a developer and distributor of software products that address critical interoperability and data integrity issues for check image exchange, announced today its release of the white paper, *Working With Image Cash Letters (ICLs) / AKA X9.37 Files*, a paper authored to address how to resolve interoperability and data integrity issues with Image Cash Letters (ICLs).

The white paper is designed for anyone contemplating working with or implementing a system that will process ICLs, and have a desire to reduce implementation costs, time and ongoing maintenance efforts. The white paper will serve as a primer for financial institutions, check image exchange network providers, lockbox service providers, IT departments that will implement or manage check clearing systems, system integrators of check payment clearing systems, corporations, retailers, and other merchants who deposit checks and/or need to reconcile check payments.

Key White Paper Topics Include:

- Evolution and current status of ICLs and related X9 standards in the financial industry
- Accuracy and usability of important extracted data elements with regard to proper clearing and processing of check images
- How to ensure interoperability with multiple systems and maintain data integrity throughout the check image exchange process

“Developing a system that processes ICLs has been an ongoing challenge in the financial industry,” said Larry Krummel, President of All My Papers. “These institutions are searching for a way to more quickly process payments, as this gives them a competitive edge - in addition to cutting cost if the system in place functions properly. This paper was designed for users and potential users of ICLs as a source to evaluate what tools and processes are available to them to implement a system that will process ICLs without introducing interoperability and data integrity problems. This white paper is a valuable educational piece that can contribute to moving the check processing market forward in a more efficient fashion.”
